Instagram Business Analytics Report

DesiBites PK — fictional Lahore home-food business · 90-day audit: 1 Aug – 29 Oct 2026 · SAMPLE DATA

■■ SAMPLE report. DesiBites PK is fictional and every number below is generated sample data (seed 42) that demonstrates the audit method. It is not a real account's analytics and must never be presented as a real client's results.

Headline: 36 posts reached 178,122 accounts and earned 20,538 engagements — an overall engagement rate of 11.53%. Followers grew from 8,420 to 9,581 (net +1,161, +13.8%). Posts drove 1,219 gross new followers; 58 unfollows in the same window explain the gap to net growth.

Engagement rate by post type

Type	Posts	Total reach	Engagement rate
Reel	18	121,417	11.14%
Carousel	9	38,202	12.71%
Image	9	18,503	11.68%

Top 5 posts by engagement rate

Post	Date	Type	Topic	Reach	Eng. rate
P36	2026-10-29	Image	Customer review screenshot	1,963	15.03%
P35	2026-10-27	Reel	Desi dessert reel	4,929	14.73%
P30	2026-10-21	Image	Menu poll / question	1,909	14.61%
P31	2026-10-22	Carousel	Weekly menu carousel	3,797	14.38%
P08	2026-08-15	Reel	Festival special reel	8,530	14.09%

What to do next (in priority order)

1. Post more carousels: they hold the highest engagement rate (12.71%) despite lower reach than Reels — one menu carousel per week is the cheapest growth lever here.

2. Keep Reels as the reach engine: highest average reach (6,745 per post). One cooking Reel per week, same format as the top dessert and festival Reels.

3. Reuse the winning proof format: the top post is a customer-review screenshot — post one real review every week; social proof beats new dish announcements.

4. Ask a question in every image post: the menu-poll post is #3 overall, so end image captions with one question to lift comments.

5. Fix the weak tail: image posts average the lowest reach — pair every price-list or announcement image with a Reel the same week.

6. Repeat, don't reinvent: the top 5 span all three formats, so the fix is volume of proven formats, not a new content idea.

Method note: engagement rate = (likes + comments + shares + saves) / reach, per post and in aggregate. Re-running src/generate_sample_data.py reproduces the identical CSV; re-running this script reproduces the identical report.
